

NOTES ON HYGROPHORACEAE—X  
THREE NEW COMBINATIONS IN HYGROPHORACEAE

EEF ARNOLDS

*Biological Station, Wijster\**

In the scope of the preparation of the volume on Hygrophoraceae of Flora agaricina neerlandica (Bas, 1983) three additional new combinations have to be made:

*Camarophyllopsis micacea* (B. & Br.) Arnolds, *comb. nov.* — Basionym: *Hygrophorus micaceus* B. & Br., in Ann. Mag. nat. Hist., Ser. V, 3: 207. 1879 (Notic. Brit. Fung. 31).

It was intended to include this taxon in the Flora as *Camarophyllopsis phaeoxantha* (Romagn.) Arnolds (1986: 643). However, I agree with Printz & Laessøe (1986: 90) that *Hygrophorus phaeoxanthus* Romagn. (1971: 874) is a synonym of the older name *H. micaceus* B. & Br. Printz & Laessøe did not propose the necessary combination in *Camarophyllopsis*.

*Hygrocybe cinerella* (Kühner) Arnolds, *comb. nov.* — Basionym: *Camarophyllus cinerellus* Kühner in Bull. trimest. Soc. mycol. Fr. 93: 144. 1977.

*Hygrocybe hygrocyboides* (Kühner) Arnolds, *comb. nov.* — Basionym: *Camarophyllus hygrocyboides* Kühner in Bull. trimest. Soc. mycol. Fr. 93: 144. 1977.
